

GREEN Concrete Floors !

For over 35 years, members of the Concrete Floor Contractors Association of Ontario have defined the standard of quality in the concrete finishing industry across Canada.

Our members have installed hundreds of millions of square feet of concrete floors for commercial, industrial, institutional and residential users.

Make sure that your next project is a success by specifying members of the Concrete Floor Contractors Association.

If you require any additional information, please feel free to call us at (905) 582-9825 or visit us on-line at www.concretefloors.ca

Concrete floor technology continues to evolve rapidly to meet the increasing demands of building owners for high quality, sustainable, low maintenance solutions. The CFCA is pleased to offer a wide array of architectural finishes and modern approaches to design that are simply **GREEN !**

Polished Concrete:

Using proprietary polishing techniques, plain or coloured concrete can be turned into a showpiece overnight. Suitable for either new or old concrete surfaces, a polished concrete finish can qualify for a building re-use credit.

Light Reflective Floors:

Light reflective surfaces can reduce lighting requirements and energy needs. These floors also have increased surface durability, extending the lifespan of a floor.

Steel Fibre Reinforcing:

Modern computerized design with steel fibres can reduce slab thickness while also creating outstanding performance.

Structural Dome Flooring:

Aerated structural flooring systems provide an innovative approach to brown field and poor soils environments by minimizing sub-grade preparation and compaction.
