

# Concrete Floor Protection Procedures

Concrete floors SHALL be protected from staining, damage and excessive loading at all times.

The following procedures shall be undertaken by all site trades during the course of their work:

1. No traffic is permitted on new concrete floors for the first 3 days after placement.
2. Foot traffic is permitted between 3-7 days after placement (curing materials must be replaced where disturbed by traffic).
3. Scissorlifts and light equipment are permitted 7 days after slab placement.
4. All vehicles SHALL be diapered to prevent oil and other liquid spills (remove leaking equipment from the jobsite immediately).
5. All tires SHALL be non-marking or taped to prevent marking of the floors.
6. Trucks, forklifts and any other heavy loads may only to be placed on the floor if they have been previously approved by the Site Manager.
7. All spills must SHALL be clean up immediately to avoid permanent staining of the concrete.
8. The concrete SHALL be protected from scratching and impact damage at all times. No cutting, painting, welding or other injurious activities shall be performed without protecting the concrete from damage *prior to the commencement of work*.

***If you have any questions, please see the Site Manager.***

***Thank you for your cooperation !***
